

# NEGATIVE PRESSURE POSITIVE RESULTS

## Innovation at its best

At Pensar Medical, we realize that no one type of negative pressure therapy works for all wounds, so our system provides you with a choice of all three. Because who knows your patient better than you?

The WoundPro<sup>®</sup> System was one of the first to offer all three vital therapies all with full adjustability for time and pressure settings:

- ▲ **Continuous**  
(holding to one single pressure)
- ▲ **Intermittent**  
(transitioning from a single pressure to zero pressure and repeating)
- ▲ **Variable Intermittent**  
(transitioning from a higher pressure to a lower pressure and repeating)

The WoundPro employs state of the art electronics and an instrument panel that is easy to operate and understand. Its sleek and lightweight design also makes it very portable and can be placed in a variety of locations while providing safe and reliable operation.

## Full Adjustability

The WoundPro allows you to choose between therapies, therapy times and pressure levels all at the touch of a button. The control panel also includes:

- ▲ Auto System Lock Out—to eliminate changes by unauthorized users
- ▲ Alarm Silence (two modes)
- ▲ Canister Illumination

## Automatic and Continuous System Checks

The WoundPro protects your patient by continuously checking for proper and safe operation. It offers both an audible and visual alarm when and if there is an interruption of normal operation which may include:

- ▲ Canister Full
- ▲ Standby Mode
- ▲ Suction line blocked
- ▲ Low Battery Power
- ▲ Vacuum leak

## A CHOICE OF CANISTER SIZES

The WoundPro can be ordered with a 300cc or 800cc collection canister, depending on the patient and the wound care environment.

We include a deodorizing agent and a gelling feature in both canister sizes. The gel packet virtually eliminates the chance of a spill during canister changes.

Advanced Series Canisters with Sure-Lock Connectors

## THE CARRYING CASE

Every WoundPro control unit comes with a lightweight and very handy carrying case. The case allows the mobile patient to enjoy freedom of movement and can be used to hang from a wheelchair. With a handy opening in the back, the control unit can also be charging the batteries while in the case.

Roomy smart pocket for personal items.

Opening at the back of the case allows power cord access in any location.

### Enlightened innovation

Unlike most medical devices, form and function come together in our sleek and modern design. The semi-opaque canister and built-in canister light allows caregivers to check exudate levels discreetly even in darkened rooms.

### Functional stability

Our new base foundation helps to stabilize the unit in any environment. It also helps to protect the unit during normal usage.

**Compact, whisper-quiet operation** and state-of-the-art electronics make the WoundPro the right choice for caregivers and patients.

**Replacement** of canisters and tubing can be achieved with a simple push of a button.

### BATTERY BACK UP

Every WoundPro control unit comes equipped with a built-in battery back-up system. This allows the unit to function normally for a full 24 hours or more. Any time the unit is plugged in, the batteries automatically recharge to full power in a very short time. The WoundPro also provides the user with a battery charge-level indicator, so you will always know if your battery needs a recharge.

### THE EZ CLASP™ ATTACHMENT SYSTEM

The versatile EZ Clasp can be oriented to securely hold the WoundPro unit from a head or footboard or an IV pole. If you prefer, the EZ Clasp can also be easily removed in seconds.

## FEATURES OF THE BASIC SERIES KITS

Adhering to the highest standards in the healthcare industry, the Basic and Advanced Series Dressing Kits offer unsurpassed quality and the best materials available.

- ▲ New, single lumen StingRay™ Suction Bell has a larger surface area to provide secure adhesion to the outer drape

Hose clamp  
for leak proof  
dressing changes

Single lumen StingRay

- The StingRay is malleable to enable application on most any part of the anatomy
- Eliminates the need for an additional security flange
- ▲ The hose clamp allows for leak proof canister or dressing changes
- ▲ Skin Prep Pad aids in preparing the surrounding skin for adhesion with the outer drape
- ▲ Two outer drapes in medium and large kit
  - One drape in small kit

## FEATURES COMMON TO BOTH KITS:

- ▲ Hydrophobic, Medical Grade Foam
  - ◆ Meets all applicable standards for quality, cleanliness, specifications and tolerances
    - Tested and passed for biocompatibility and cytotoxicity
  - ◆ Offers a pore size that is most advantageous for this therapy
    - Allows for effective removal of exudate
  - ◆ Provides excellent tensile strength
    - Virtually eliminates the chance of flaking and leaving particulate matter in the wound bed
  - ◆ Non-absorbent
    - Allows exudate to pass through for collection in the canister and away from the wound site
- ▲ New and Improved Outer Drape
  - ◆ 3 tab pull system makes it easy to apply
  - ◆ Aggressive adhesive helps to prevent micro leaks
  - ◆ Clear backing layer takes the guess work out of proper and targeted application over the wound
  - ◆ Repeating linear logo placement serves as guidelines for cutting into strips if needed
    - More substantial drape material makes it easier to apply and less subject to the effects of static electricity

Basic Series Canister

# FEATURES OF THE ADVANCED SERIES KITS

Our advanced series dressings kits provide unsurpassed care, primarily because of our patent pending, dual lumen StingRay Suction bell. The StingRay enables our advanced kits to measure pressure at the wound site, unlike other products that measure pressure as far as 34" away or more. In short, you are assured that the pressure you set at the control unit is exactly what is happening at the wound site. (See chart below).

Our advanced kits include everything you need to create a nurturing, healing environment for virtually any wound; including our medical grade foam dressings, a Skin Prep pad, illustrated instruction sheet and ruler. They also include:

- ▲ Error proof and color-coded, Quick Connect Tubing Connectors will not disconnect during inadvertent patient movements.
  - ◆ An audible and tactile “click” assures air-tight and secure connections
  - ◆ During canister or dressing changes, circular mating of connectors eliminates the need for clamps or plugs
    - Clamps along the tubing can be potential pressure points under the patient
- ▲ Two outer drapes in medium and large kit
  - ◆ One drape in small kit

Dual Lumen StingRay™

Quick Connect Tubing Connectors

Sure-Lock connection for easy, leak-proof, canister disposal.

## A comparison of the WoundPro and Most Competitive Units' Performance

The WoundPro delivers accurate pressure readings whether the unit is placed significantly higher (on an IV pole) or lower (on the floor) than the wound site, both of which frequently occur.

The only time you get accurate pressure readings with most competitors' units is when the pump is at the **exact same level as the wound**.

Your WoundPro Control Unit comes complete with everything you need to administer negative pressure therapy. Just choose your dressing kit style and size, and matching canister and you are ready to go. Along with an Owner's Manual, a Quick Reference Card is included with info on the user basics.

### WoundPro<sup>®</sup> Product Line and Accessories\*

Description	Quantity/Case
<b>WoundPro<sup>®</sup> Negative Pressure Therapy Control Unit</b>	1
<b>Canisters</b>	
Small Canister (300cc w/5' tubing) Case	16
Large Canister (800cc w/5' tubing) Case	16
<b>Dressings and Dressing Kits</b>	
ProFoam Hydrophobic Dressing Only—Small (Case)	10
ProFoam Hydrophobic Dressing Only—Medium (Case)	10
ProFoam Hydrophobic Dressing Only—Large (Case)	10
ProFoam Hydrophobic Dressing Kit—Small	10
ProFoam Hydrophobic Dressing Kit—Medium	10
ProFoam Hydrophobic Dressing Kit—Large	10
<b>WoundPro Cover Dressing (Outer Drape)</b>	
WoundPro Cover Dressing (25 Pairs per box)	25

**Warnings** — Failure to observe the following warnings could result in serious injury to the patient, up to and including death. All instructions and guidelines in the Operator's Manual and dressing kits must be read and followed when using the WoundPro system.

The Operator's Manual provides general guidelines for the proper use of the WoundPro negative pressure wound therapy system. These guidelines are not intended in any way to replace instructions from the patient's physician. Failure to obtain and follow specific instructions from the treating physician could result in injury or death.

If the protective barrier is punctured by sharp objects such as bone fragments, hardware, or staples in the wound bed, serious injury or death could result.

**Additional Precautions** – Additional care should be taken when using WoundPro on patients taking anticoagulants or platelet aggregation inhibitors, patients with active bleeding, patients with wound hemostasis, patients that have a history of irradiated blood vessels, wounds that involve a fistula, wounds with sinus tracks, wounds with tunneling, or when using WoundPro in close proximity to blood vessels or organs.

Care should be taken to avoid injury to the patient's skin where it comes into contact with the tubing from the dressing.
